EDUCATION & TRAINING

Digital systems for learning, administration and engagement

Websites, portals, booking systems and bespoke platforms for schools, universities, childcare providers and training organisations.

26 years
of digital experience

Bespoke systems & integrations
built around how your organisation already works

Long-term support
from the team that builds your system

For education and training organisations

Digital systems built around how education organisations work

Schools, colleges, universities, childcare providers and training organisations serve many different people at once. We build the systems that make that work simpler.

Admissions and enrolment

Online applications, enquiries and prospectus requests that arrive complete and reach the right team.

We've built this for Fruity Club and Moira House

Learner and parent portals

Secure sign-in areas where parents and learners find what they need and keep their own details up to date.

Course and resource platforms

Clear, searchable course information, guidance and resources, organised so people find the right route quickly.

We've built this for the University of Greenwich and The ESP

Booking and scheduling

Bookings for clubs, sessions and events, with venue and day choices and payment set-up built in.

We've built this for Fruity Club

Administration and data management

Admin areas where the right staff manage applications, records and updates in one place.

We've built this for Fruity Club, Gildredge House and Moira House

Websites and digital prospectuses

Websites your staff can update themselves, and prospectuses that make complex information easy to explore.

We've built this for Gildredge House, Moira House and the University of Greenwich

Training and apprenticeships

We also build for the electrical industry's skills and training bodies: The ESP's website bringing training routes together, the Electrical Careers portal for apprenticeships and training routes, the SkillELECTRIC competition website for apprentices and learners, and NET's assessment website with its Find a Centre service.

Our education work

Real systems for real education organisations

Fruity Club

The challenge. Fruity Club runs Ofsted-registered after-school and holiday clubs at schools across London. Parents needed a simple way to apply, and the team needed one place to manage what came in.

What we delivered. An online application and booking system. Parents choose a club venue and the days they need, register their children and set up payment by direct debit with GoCardless. A secure dashboard lets the team manage applications and track enrolments across its venues, and prospective staff apply online too.

Why it matters. Applications, enrolments and staff recruitment are handled online, in one system built around how the clubs run.

At a glance

Organisation
Ofsted-registered childcare provider

Clubs
After-school and holiday clubs at London schools

We built
Parent applications, admin dashboard, staff applications

Payments
Direct debit set-up with GoCardless

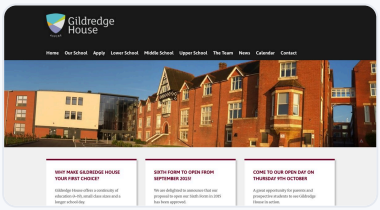

The prospectus CD-ROM, 2007

University of Greenwich

Requirement
A way for prospective students to explore every course, when printed prospectuses were the norm.

What we delivered
A searchable digital prospectus on CD-ROM, presenting all course information in a clear, easy-to-read format.

Result
An early example of our work turning complex information into a usable digital experience.

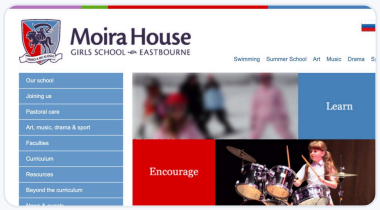

Homepage

Gildredge House

Requirement
A website for the Eastbourne free school that its own staff could keep up to date.

What we delivered
We built the site with an admin area for news, events, school bulletins, governors, staff and vacancies, and email newsletter sign-up.

Result
School staff could publish news, events and documents themselves, from one place.

Homepage

Moira House

Requirement
A website for an independent girls' school in Eastbourne, from nursery to sixth form.

What we delivered
We built the site with news and events for each part of the school, vacancies, and online enquiry and prospectus request forms.

Result
News, events and admissions enquiries came together on one site that school staff kept up to date.

Integration, accessibility and data protection

Connected, accessible and careful with data

Education systems hold information about children, parents, learners and staff. Here is how we approach connecting, opening up and protecting it.

Working with the systems you already use

Connected, not replaced

New tools link to the databases, line-of-business systems and third-party services you already rely on.

Payments

Fruity Club's applications take parents straight on to setting up direct debit with GoCardless.

News and events that travel

Our school websites published news and events as feeds, so the same information could appear elsewhere without retyping.

We connect to what you already have before suggesting anything new.

Tell us which systems you use and we'll talk through how a new tool would fit alongside them.

Accessibility, data protection and children's data

Accessibility in practice

Clear structure and plain language, plus features that help people finish: Fruity Club's staff application has a dyslexia-friendly reading mode and lets applicants save long forms and come back later.

Data protection

Built with UK GDPR in mind: personal information is handled securely, sent over encrypted connections, and only the staff who need it can see it.

Children's and parents' data

Designed with the sensitivity of children's data in mind, with appropriate access controls and administrative oversight. Your safeguarding policies stay with your organisation.

Working to a particular policy or standard? Tell us what you need to meet and we'll talk through how the system would support it.

Why eplatforms

Built around your organisation, not a product licence

Education organisations often end up bending their processes to fit a product. We build around the way you already work.

Bespoke where it matters

We build custom only where off-the-shelf software doesn't fit, such as applications and bookings across several club venues.

Integrate before replacing

New tools connect to the systems and suppliers you already use. Nothing is replaced for the sake of it.

Designed for different users

Administrators, teachers, parents, learners and prospective students each need something different, so each gets a journey designed for them.

Long-term support

Hosting, maintenance and updates after launch, from the team that built the system.

What happens when you speak to us

A conversation

You tell us what isn't working and what you need. There's no charge and no obligation.

A look at what you have

We review the systems, information and processes involved.

A clear proposal

What we recommend, why, and what it involves, in plain English.

Build and support

If you go ahead, the same team builds, tests and looks after it.

Talk to us about your education system

Whether it's admissions, bookings, a portal or a website your staff can run themselves, we're happy to talk it through.
