ELECTRICAL INDUSTRY

A specialist digital partner to the UK electrotechnical sector

We design, build and support digital platforms for assessment, certification, careers, skills and industry organisations. Our work spans national assessment services, the ECS card scheme, apprenticeship guidance, skills competitions, trade bodies and electrical businesses.

SkillELECTRIC finalists at work. We built and host the competition's website.

ASSESSMENT TO CERTIFICATION

NET, Experienced Worker Assessment and ECS

CAREERS AND SKILLS

Electrical Careers, The ESP and SkillELECTRIC

TRUSTED BY THE SECTOR'S KEY ORGANISATIONS

NET, the JIB, The ESP and more

What we do for the electrical industry

Digital systems built around the electrical industry

Our work reaches the organisations that shape how people enter, train, qualify and work in the UK electrotechnical sector, and the businesses that employ them.

Assessment and competence

Websites and online services that help candidates, centres and employers through end-point assessment, occupational competence and experienced-worker routes.

For NET and Experienced Worker Assessment

Certification and card schemes

Website design and development for the scheme that issues the industry's recognised qualification cards.

For ECS, the Electrotechnical Certification Scheme

Careers and apprenticeships

Career portals, apprenticeship information and digital resources that help people understand the routes into the industry.

For Electrical Careers and the JIB's apprenticeship services

Skills and competitions

Websites and online forms for competitions, campaigns and initiatives that promote high standards of training.

For SkillELECTRIC and the Rogue Trainers campaign

Trade and industry organisations

Websites, member directories and digital infrastructure for organisations representing employers, workers and the wider industry.

For the JIB, The ESP and the ECA

Mobile apps and integrations

Apps, APIs and integrations that connect existing systems and put information in people's hands.

The JIB's apprenticeship apps; NET's online appeals, linked to its appeals system through an API

Hosting and ongoing support

Long-term maintenance, hosting, security, monitoring and continual development. NET, The ESP, Electrical Careers, SkillELECTRIC, Experienced Worker Assessment, Rogue Trainers and Goring Electrical Services all run on servers we manage.

Assessment, competence and certification

Where accuracy matters most

Candidates, centres and employers rely on clear information and services that work, from finding an assessment centre to proving a qualification.

NET: supporting national electrotechnical assessment

The requirement. NET is the charity that manages electrotechnical assessments, including the AM2 range and end-point assessment, through centres across England, Wales and Northern Ireland. Candidates, training providers and employers needed to find a centre, check availability and, when necessary, appeal a result.

What we deliver.

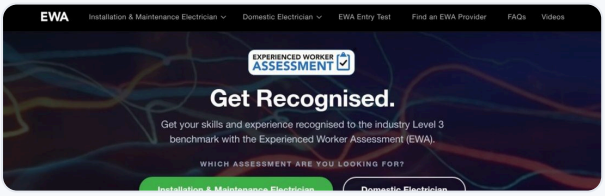

- NET's website, designed and built by us
- Find a Centre, searchable by location and assessment type, including AM2, AM2S and AM2E
- Centre Availability, filtered by month and region
- Online appeals, linked to NET's own appeals system through its API
- Registration forms and centre search for experienced-worker assessment

Charity managing electrotechnical assessment

We provide
Website design, development and hosting

Also for NET
The SkillELECTRIC competition website

electrical-ewa.org.uk

Experienced Worker Assessment

The requirement
Many electricians have years of practical experience but no formal Level 3 qualification. They needed a clear, confident way to have that existing competence recognised.

What we delivered
A website built around two routes, Installation & Maintenance Electrician and Domestic Electrician, with eligibility guidance, FAQs and a Find an EWA Provider search. Built for The ESP and hosted by us.

Certification

ECS: the Electrotechnical Certification Scheme

ECS cards show the qualifications and competence of people working in the electrotechnical industry, and employers may require a valid card. The scheme is run by the JIB.

What we worked on
Commissioned through the JIB, we redesigned the ECS card scheme's website and its homepage, including responsive template coding.

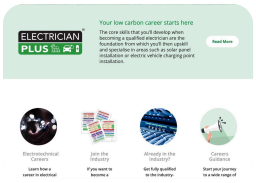

Alongside it
Our work for the JIB has included the ECS Check subscribers directory on its website, showing which organisations check cards.

The electrical skills and competence journey

From first interest to a recognised career

Our work touches several stages of the electrical skills lifecycle, from the first search for a career to the card an electrician carries on site.

Careers

Electrical Careers

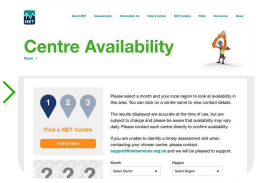

Discover the profession and the routes in

Training & skills

The ESP, SkillELECTRIC, Rogue Trainers

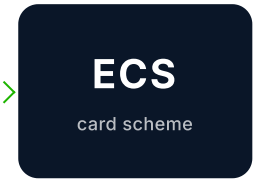

Understand recognised training and show practical skill

Assessment

NET, Experienced Worker Assessment

Assessment and recognition of competence

Certification

ECS

Certification and industry identity

Industry

JIB, contractors, suppliers

Employment standards and working in the trade

We have built and supported digital services at every one of these stages.

electricalcareers.co.uk

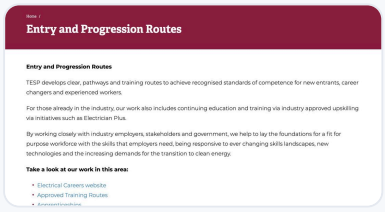

Electrical Careers

The requirement

One trusted place for anyone considering a career as an electrician, from school leavers to career changers.

What we delivered

Training routes and apprenticeship guidance, and career videos managed from a bespoke admin area. Built and developed by us.

the-esp.org.uk

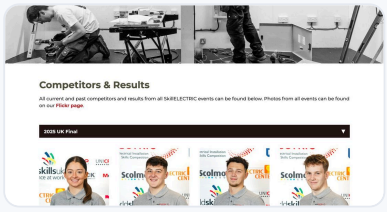

The ESP

The requirement

One website for the skills partnership formed by the ECA, the JIB, NET, SELECT and Unite the Union.

What we delivered

Entry and progression routes, labour market research libraries, news and annual reports, run day to day by The ESP's team.

skillelectric.org.uk

SkillELECTRIC

The requirement

A clear path for apprentices from entry to the UK final of the industry's skills competition.

What we delivered

Entry guidance, national heats, results from each final and online competitor forms. Built for NET and hosted by us.

Rogue Trainers

The ESP's campaign helping would-be electricians avoid unrecognised courses: red-flag guidance and real video stories, designed and built by us.

JIB apprenticeships

Apprentice registration, apprenticeship apps including the Apprenticeship Guide app and its back end, and the Apprenticeship Essentials section.

Headline partnership

JIB: website, systems and apps

The JIB sets standards for employment, welfare, grading and apprentice training in the electrotechnical industry. Our work for the JIB has included its website, the systems and apps around it, and hosting.

- JIB website and hosting
- A redesigned JIB website
- Postcode radius search
- Apprenticeship apps and their back end
- Preferred Training Providers admin
- Member profile project
- ECS card scheme website redesign
- Apprentice registration
- Cost benefit calculator
- Apprenticeship Essentials section

NET
National electrotechnical assessment charity. Website, Find a Centre, availability and API-linked appeals.

JIB
The Joint Industry Board. Website, systems, apps, hosting and support.

ECS
Electrotechnical Certification Scheme. Website redesign and responsive homepage.

The ESP
Electrotechnical Skills Partnership. Website, research libraries and hosting.

SkillELECTRIC
Industry skills competition. Website, results, competitor forms and hosting.

Electrical Careers
Career and apprenticeship guidance. Website, training routes and career videos.

Experienced Worker Assessment
Competence recognition. Website, two assessment routes and a provider finder.

Rogue Trainers
Industry awareness campaign. Campaign website with guidance and video stories.

Goring Electrical Services
Electrical contractor for new-build housing. Website and hosting.

ECA
Electrical Contractors' Association. Career options work for Electrical Careers.

Why eplatforms

A technical partner that already knows the sector

Electrical industry bodies need systems that fit how the sector works, and a partner who stays with them after launch.

We already understand the environment

We already work with electrical industry bodies, so less time goes on learning how the sector is organised and the terms it uses, from AM2 to ECS cards.

Bespoke systems, not forced products

NET's centre search, availability and appeals were built around how NET works, rather than bent to fit a package.

Integration over unnecessary replacement

New services connect to what you already run. NET's online appeals feed its existing appeals system through an API.

Long-term support

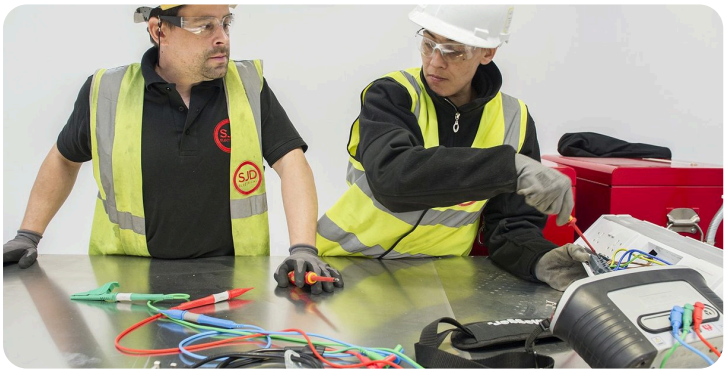

Hosting, maintenance and improvements after launch, from the team that built the system.

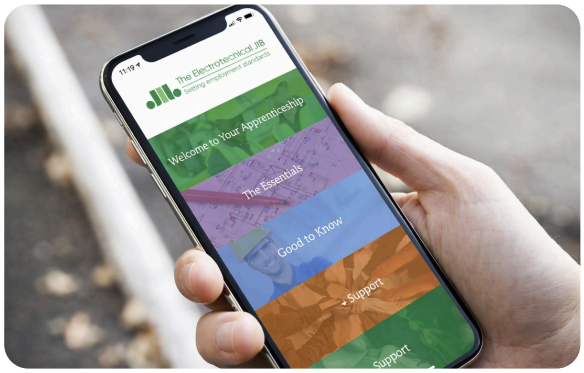

Technical continuity

Development, hosting, security, monitoring and ongoing improvement with one technical partner, on servers we manage.

Independent advice

We aren't tied to a particular software vendor or platform, so our recommendations follow what your organisation needs.

Left: electricians testing an installation, from The ESP website. Right: a JIB apprenticeship app we built.

Talk to us about your platform

Whether it's assessment, certification, careers or a website for your organisation, we're happy to talk it through. There's no charge and no obligation.
